

Seven Gates Homeowners Association Architectural Control Standards

Architectural control standards are intended to help maintain the property values and appearance of our neighborhood. As outlined in Section 8.6 of the Seven Gates Declarations, external changes or additions to a unit require written consent from the Association. This is obtained by submitting an application to the Design Review Committee (DRC) and receiving approval prior to construction. Any request that falls outside the boundaries of these guidelines and does not meet existing design standards must be submitted by the DRC to the Board of Directors for final approval along with a recommendation and rationale. Architectural Modification Request forms can be found on the management company website, and completed forms should be mailed or emailed to Lambeth Management:

email: Tiffany.Lmgmt@gmail.com, mail: PO Box 8071, Greensboro NC 27419

The standards and guidelines below are for some common items requested in the neighborhood. Other changes or additions will be considered by the DRC as submitted.

Fences and Walls

- Fences and walls will be in keeping with the design of brick fences or walls already existing in the neighborhood. However, new construction of solid brick or pierced brick fences and walls must be double thickness in the same color as the brick on the unit's buildings with wrought iron look-alike aluminum gates. Requests for rock or brick retaining and landscaping walls require approval by the DRC.
- Fences and walls can only be at the rear of a unit. The height will be consistent with other fences in the neighborhood. The size of a fenced in area can vary based on approval by the DRC and will depend on impact on lawn maintenance, irrigation system, and the topography of the land, but in no cases can the fenced in area extend past the sides of the unit to which the fence is attached or exceed 28 inches beyond the depth of the patio. The DRC will consult the Landscape Committee relative to any impact on lawn maintenance.
- Fenced in areas can contain porches, patios and grassed/landscaped areas. All areas enclosed within the fence as well as the fence must be maintained by the Unit owner.

Trash Can Enclosures

- Trash Can Enclosures will be in keeping with the design of trash can enclosures already existing in the neighborhood. However, they need to be double thickness

solid brick or pierced brick walls in the same color as the brick on the unit's buildings. The cost of installation as well as repair and maintenance of the trash can enclosure and sidewalk are the responsibility of the unit owner.

- Trash can enclosures will only be approved on the side of a unit and can only be installed on units where the driveway is on the outside wall of the unit. For example, 5311 Perrou Ct cannot have a trash can enclosure, since the driveway is on the inside wall of the unit.
- Trash can enclosure sizes and locations will be approved by the DRC based on the topography and consistency with neighborhood standards.
- When installing the trash can enclosure, the unit owner must have a sidewalk installed from the driveway to the enclosure and must pour a concrete pad the size of the enclosure.

Handrails

- Handrails can be installed on front steps if they are similar in style to other handrails in the neighborhood. Handrails must be black and have a wrought iron look.
- The new rails can be attached in a variety of ways with the help of the contractor. It is recommended that you follow the contractor's guidance. Where the rails are being secured to a brick wall, please have the contractor avoid drilling into the brick and drill into the mortar joint instead.

Porches and Patios

- Porches and Patios approved by the DRC will be in keeping with the size and design of the porches and patios already located in the neighborhood.
- They will be of construction materials similar to those used on other porches and patios in the neighborhood including the same brick color, vinyl siding color and stamped concrete color.
- Locations and designs of porches and patios will be approved by the DRC based on aesthetics, topography, and landscape and irrigation system maintenance.

Attic Fans and Solar Tube

- Attic fans must be installed on the rear of the unit. Attic fans and solar tubes can be installed after approval by the DRC.

- The unit owner must agree to not only maintain the attic fan or the solar tube, but also pay for any water or other damage caused by the installation, operation, and/or maintenance of the attic fan or solar tube. This includes any additional cost that will be charged by the roofer when the unit is re-roofed.

Requests that are automatically approved:

- Storm doors on the front or rear of the house that are of the pre-approved type on the management agent website.
- Window screens on the side and rear of the unit.
- Duke Power Energy Saver Boxes
- Handrails for the front, rear, or garage steps that follow the pre-approved instructions on the management agent website.

Requests that will not be approved:

- Widening/narrowing of driveways
- Installation of parking pads
- Sidewalks other than to trash can enclosures
- Invisible dog fences
- Any changes to original foundation to unit as built by developer
- Window screens on the front of the unit
- Screen doors on the front door
- Room additions that are not all brick
- Room additions where the foundation exceeds the original platted footprint for the unit as per the Guilford County plat map for the Seven Gates Community.

The Architectural Standards have been reviewed and approved by the Board of Directors.
